

CERAM-KOTE COATINGS, INCORPORATED
introduces to its family of products:
NEW! CeRam-Kote 54® SST

The new CeRam-Kote 54®SST coating has been engineered from only the best raw materials, utilizing only the newest technology in surface tolerant coatings. The outstanding performance of the original CeRam-Kote 54® has been modified to be more forgiving over less-than-ideal prepared substrates.

CeRam-Kote 54® SST has been formulated to be applied over marginally prepared substrates and rusty steel surfaces. It can be used over itself or as a primer under high performance topcoats, as a barrier coat or universal primer. CeRam-Kote 54® SST offers outstanding adhesion even if the substrate isn't blasted! It is tolerant of moist/damp surfaces and is suitable for use in USDA inspected facilities.

CeRam-Kote 54® SST is used as a maintenance coating to protect steel structures in industrial facilities, bridges, tank exteriors, marine weathering, offshore, oil tanks, piping, roofs, water towers and other exposures. CeRam-Kote 54® SST has good chemical resistance to splash/spillage, fumes and immersion in neutral, fresh and salt water.

We believe it is the best surface tolerant product on the market today!
