

Frac Tanks

Customers: ASAP Rentals
 Phillips Fabrication
 BASIC
 Car-Tex Transport

Location: Permian Basin Oilfield

Applicator: Freecom, Inc.

Compare our ceramic/epoxy and ceramic/urethane coatings against typical alkyd-based paints or competitive epoxy coatings, and you'll find we not only excel in performance, but are also very cost competitive. CeRam-Kote has been used in the oil industry for over 21 years with excellent success.

Our **competitive edge** comes from our **ceramic loading technology**, which makes our coatings **TOUGHER** protective coatings than the competition.

Our coatings offer outstanding chemical resistance to the most common oilfield fluids: Saltwater, HCL, Oils, Fuels.

We offer internal coatings as well as external coatings. Both systems resist all types of common oilfield fluids, and still maintain our **damage-resistant** qualities, essential for use in the oil patch. The frac tanks are internally lined with CeRam-Kote 2000TL for chemical resistance. Externally, CeRam-Kote 54@ SST is the surface tolerant primer, and CeRam-Thane 300, our top of the line polyurethane offers excellent UV protection.

Our facility manufactures all the CeRam-Kote coatings to tight quality specifications (ISO 9000; we are a Lockheed-Martin Approved Vendor). We also apply the CeRam-Kote coatings at our 10-acre facility in Big Spring, Texas.
